• Concept note on webinar

The COVID 19 pandemic has brought unprecedented changes worldwide in the socio – economic life as well as in the health sector. The demographic composition of India's population poses a challenge for country's healthcare system. About 70% of India's population lives in rural areas making it harder for these people to access care compared to those who live in urban areas. Increasing access to health care in rural areas is difficult due to the lack of infrastructure and medical professionals and there is a lack of health awareness among people consequently people often come to

healthcare facilities when their disease is worsened or reached a late stage resulting in lower chance of effective treatment. We believe in the maxim *prevention is better than cure. & Health is wealth*. So, awareness campaigns are needed to empower people with knowledge to safeguard and manage their own health. The educational institutes are centers to communicate health awareness, preventive and protective measures. The present webinar is aimed at to create awareness about health literacy and wellness, which is more than being free from illness. Wellness is a dynamic process of change and growth state of complete, physical, mental and social well being. This webinar provides a platform to discuss and deliberate issues related to health and to seek solutions, to cope with these problems. This is a sincere attempt by the department of Science and the IQAC to educate and empower both students and community. The webinar will connect experts to interact with students ,teachers and stakeholders and provide a platform for elaborate deliberations and discussions among the intellectuals on the topic *Health Awareness and Wellness for Healthy Lifestyle*
